

PARQUE TECNOLÓGICO
DE GRAN CANARIA
ÁREA EXPERIMENTAL
DE ECONOMÍA CIRCULAR

How can you participate on our Project?

Through our website:

(e-circularcanarias.es) you can find all the information on how to apply for participating in this space with your business project based on Circular Economy that involves the generation of employment.

Who supports this project?

Our Park is led by the **Mancomunidad del Norte** with the support of the **Government of the Canary Islands** and the **Cabildo de Gran Canaria**, with funding from the European Regional Development Funds (ERDF) of the European Union.

The Society for the Economic Promotion of Gran Canaria (**SPEGC**) advise us about the business view and the Canary Islands Technological Institute (**ITC**) advise us about the scientific point, while the **University of Las Palmas de Gran Canaria** collaborates with innovation and research projects.

Our park

The Park constitutes a fundamental dynamising element for R+D+i activity in the north of Gran Canaria through the creation and location of this experimental area, with spaces for training, entrepreneurship and specialized laboratories with the support and participation of public and private entities.

The concept of the Park encompasses several scientific and technological areas linked to the Circular Economy with the aim of creating a unique space in the Canary Islands that will serve companies and entrepreneurs to develop their projects that generate knowledge and employment.

Its location is ideal as it is in an area far from large urban centres, close to the sea, which stands out for being a strategic territory in terms of renewable solar, wind and sea-related, tidal and wave energies, as well as its links with water and primary sector in which the Northern Region of Gran Canaria is a reference point on our island.

Where are we located?

The Park is in the municipality of Gáldar, in the island called Gran Canaria, Canary Islands, Spain, European Union, on a publicly owned plot of land with a classification and category of land suitable for the development of the planned activities.

Facilities and spaces

The facilities include offices, laboratories, training rooms, an assembly hall, coworking areas and plots of land for business research projects.

The Park has a main two-storey building of 2.500 m², in addition to a plot area of more than 11.000 m² for testing and trials of innovating and research companies, a privileged place from which to explore the green and blue economies.

What do we offer?

Our commitment for the Circular Economy is materialized in the creation of synergies through a unique space of Gran Canaria that aspires to be a generator of ideas, innovation, and development in the Canary Islands.

The projects installed on our spaces will have business support services for their integral development (training actions, assistance to events and programs, business advice and support services).
